Portfolio: www.dzenis.tech

Job Objective:

I am currently seeking a position with an ambitious company that welcomes aspiring software development engineers, who are eager to learn and advance their skillset for their own growth and the company's benefit. I am committed to a long-term career with a company that offers me the opportunity to become a valuable member of their team, and I am dedicated to contributing my best efforts to achieve that goal.

Performance Profile & Personal Statement:

I am a driven and results-oriented professional with experience in sales, business administration, logistics, and human resources. Through these roles, I have gained valuable skills and developed a strong work ethic, along with teamwork and leadership abilities.

Despite my success in these areas, I felt unfulfilled without a passion for my work. My interest in computers led me to pursue web development, and since 2017, I have focused all my efforts on learning programming. Through trial and error, I gained proficiency in coding, and for the first time, I felt I had found my purpose.

In 2018, I began freelancing, building front-end and full-stack solutions for clients through platforms such as Upwork. My focus was to gain practical experience working with customers and testing my coding skills. Although I have enjoyed the freedom of freelancing, I have always sought to be part of a team of passionate individuals, committed to making a positive impact through their work.

Despite my lack of previous employment in the programming industry, my skills are at an intermediate level, and I am continually improving. Programming presents a never-ending challenge, and I remain committed to self-improvement and learning, fueled by a remarkable work ethic and discipline.

Your sincerely,
Dzenis H.

Language Skills:

Bilingual proficiency in English [speaking, writing, reading].
Limited working proficiency in **German** [able to work with others].
My native language is Bosnian (Serbian-Croatian).

My Interests:

Meditation

A.I.

Books

Technical Competencies:

Tech stack:

- **HTML5** [w/ the newest standards & approaches].
- **CSS3** [Grid, Flexbox, Animations, **Sass**].
- **JavaScript** [proficient with vanilla **ES6** and above].
- **React 16+** [familiar with its entire ecosystem].
- **Redux** [my essential tool for state management].
- **React Native** [my choice for mobile development].
- **NodeJS** [mostly with **ExpressJS** & **SailsJS** too].
- **MongoDB** [natively or/ and with **Mongoose**].
- **Bootstrap 4** [great with **MaterializeCSS** too].
- **GraphQL** [as an alternative to RESTful APIs].

Deployment:

I use various platforms depending on the type and the size of the project, including: **Heroku**, **Firebase**, **Netlify**, **App Engine**, **AWS**, **Google Cloud**.

Additional utilities:

Git [as my version control system].
Webpack [for module bundling].
TypeScript [best helper "tool" for development].
Gulp [when a task runner is required].
Babel [for backward compatibility of ES6+].
Postman [as my API development testing tool].
Lodash [often required as my helper library].
Jest, **Enzyme**, **Mocha** [as my testing utilities].
EJS/ HBS [when all focus is on the backend].

NOTE: AS THE SKILLS AND EXPERIENCE OF A DEVELOPER GROW, SO DOES THE LIST OF TOOLS USED. IT COMES TO A POINT WHERE IT IS HARD TO LIST EVERYTHING, BUT TO ME, THE ONES LISTED ABOVE ARE THE MOST RELEVANT.
